Figma, JavaScript, Python, C#, Java, HTML/CSS, Django, Unix/Linux, SQL, Version Control

Projects

UX/UI Research Group

- Used Tobii Eye Tracking software to design and conduct experiments which tested the usability of the Baldwin Wallace Library website.
- Recruited participants of varying age and computer knowledge.
- Analyzed data from experiments and delivered feedback and suggestions to the client.

Medical Records Software System, Mission Guatemala

- Part of a four-person team working on a multi-phase, dual-language, medical records system to improve the effectiveness of health care delivery in a rural area of Guatemala.
- Conducted remote user-testing and saw a need for a better user experience, completely redesigned the user interface and process flow using C# in Visual Studio using .NET framework.
- Daily standups, sprint reviews, retrospectives, and planning helped the team work smoothly and effectively.

Phunix, Baldwin Wallace Speech-Language Pathology Department

- Part of a three-person team working on a fun, web-based study tool to help students practice phonetic transcription and professors assign study materials and track student progress. This project was written in Angular and Java using the Spring framework.

Work

Qwickly, Cleveland, OH   August 2021 - Present
Full Stack Developer and Designer

- Redesigned and developed a new user interface with a focus on mobile responsiveness and accessibility.
- Developed new major features for a product leading to an increase in sales.
- Followed SCRUM methodology and collaborated closely with members of the development team.
- Managed all design files and assisted in the creation of a new design system to make all company products cohesive.
- Created client specific solutions after gathering requirements and creating proposal documentation.
- Collaborated with front end developers to create a reusable components system.

Menards, Cuyahoga Falls, OH   June 2018 – August 2021
